Research Report Writing

General Presentation & Format

- ALL reports should be typed
- Have a neat, clean cover
- Double-space
- Don't Mix pen and typing
- Page numbers should be centered at the BOTTOM of each page
- Follow format and sequence

Hints on Report Writing

- Avoid long, involved sentences and overuse of polysyllabic words.
- Use the active voice instead of the passive voice.
- Avoid excessive use of nouns as adjectives.

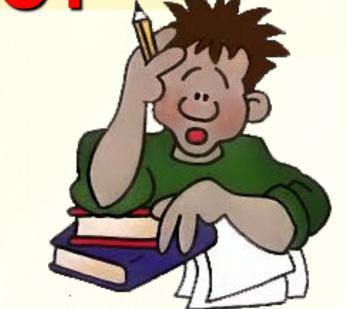

Hints on Report Writing

- Don't hide your findings in noncommittal statements - BE POSITIVE
- Keep specialized jargon to a minimum.
 - Keep technical abbreviations and acronyms to a minimum.
- Avoid repeating facts and thoughts.
 - Be concise and succinct.

ABSTRACT

- Brief, ONE PAGE MAX
 - Writing a clear, concise abstract is an art!

- Summary, including the nutshell of your results and conclusions.
- Include the <u>dates and location</u>
- Write the abstract last no page #
- Must match the rest of your findings

TITLE **PAGE** Name of Project Your Name **Date Course Instructor School** City & State

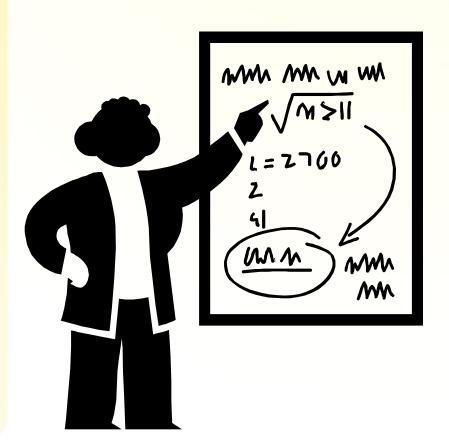

Table of Contents

Page

Introduction	1
Materials	.5
Methods	.6
Results	.7
Discussion	12
Conclusion	20

INTRODUCTION

 This part of the paper presents the background, justification, and relevance of your study

INTRODUCTION

- State the problem and objectives
- Hypothesis (if applicable) to be tested
- Brief background, with cited review of literature
- Relate the problem and significance to the discipline

INTRODUCTION

- Use a wide variety of sources, from research journals to books, to DVD's to the Internet.
- Include at least one <u>print</u> source
- Condense the information you've found.

Paraphrase, not plagiarize

Citations

 Information learned from outside sources needs to be "cited" in the Introduction - like writing footnotes, only easier.

Citations

- RULE 1 Cite all sources that refer to information on your species, experiment, or study site.
- RULE 2 Cite all sources that back up your conclusions.
- RULE 3 Cite anything that brings in a fact not directly taken from your own observations.
- RULE 4 WHEN IN DOUBT, CITE!

Example of Proper Citing

White sharks are known to be man eaters (Halstead, 2008). They are the only shark that regularly preys on marine mammals for food. Some scientists believe that great whites attack humans by mistake: the silhouette of a surfer paddling on a surfboard may be mistaken for a seal sunning on the surface (Ellis, ed., 2011).

Variations In Citations

- One Author: (Bronowski, 2003)
- Two Authors: (Walker and Maben, 2005)
- Three or More Authors:
 (Cochran, Wiles, and Manack, 2011)
- No Authors: (Insects of Guam, 2010)
- Only an Editor: (Ellis, ed., 2011)
- Citing Experts You Have Spoken To: (Whitcraft, pers. commun.)

- Materials (in narrative form)
 - Describe EXACTLY what you used to do your research
 - (Ti-83 calculator, Smart Phone app, x-rays, snap-trap, BioRad gel electrophoresis equipment)

- Methods (Procedure)
 - Sampling dates
 - Locations
 - Methods used

 Concise, but detailed enough that a reader could duplicate your investigation

 Standard procedure descriptions should be kept extremely concise.

 Including properlylabeled diagrams or photographs of any

 In a field study, a site description is required, complete with site maps.

- Computer software should be fully cited, including the version used.
- Statistics used to analyze your data should be included and cited.

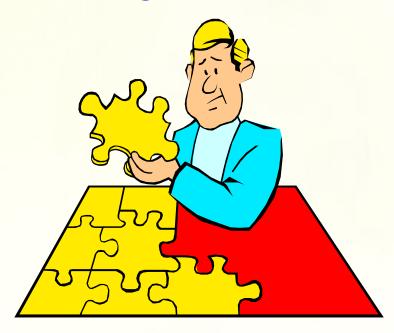

RESULTS

- Contains a description and interpretation of the data
- Include qualitative observations you made during the study.
 - NOT just a data summarization
 - NOT just pages of tables and figures...

RESULTS

- Tell the reader exactly what you found
 - What patterns
 - Trends
 - Relationships observed

 Photos, graphs, or diagrams that visually describe your results.

RESULTS

Label graphs & tables correctly

Table 2. The number of brine shrimp found in sections of tubing after the shrimp were exposed to changes in light, pH, or temperature, on October 2, 2004 at Fremont HS.

VARIABLES I	SECTION 1	SECTION 2	SECTION 3	SECTION 4
CONTROL	24	30	18	25
LIGHT	1 0 (light)	13	40	26 (dark)
рH	8 (acid++)	3 (acid-)	52 (base+)	3 (base ++)
TEMP	13 (hot)	24 (warm)	38 (cool)	21 (cold)

Line Graph

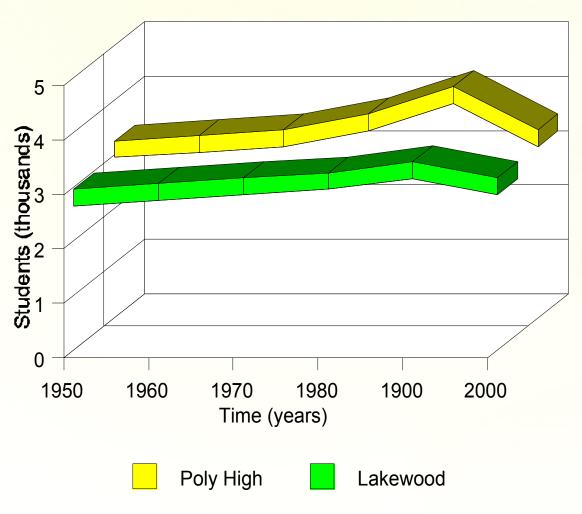

Figure 1. Number of students attending Poly High and Lakewood High since 1950.

Bar Graph

Use comparable increments

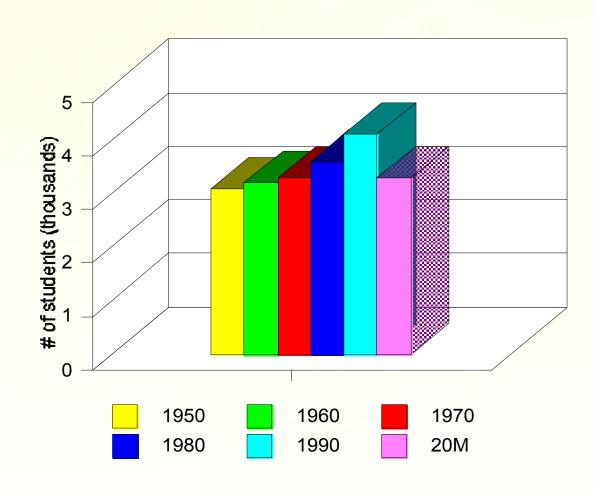

Figure 2. Number of students attending Long Beach Polytechnic High since 1950.

Pie Graph

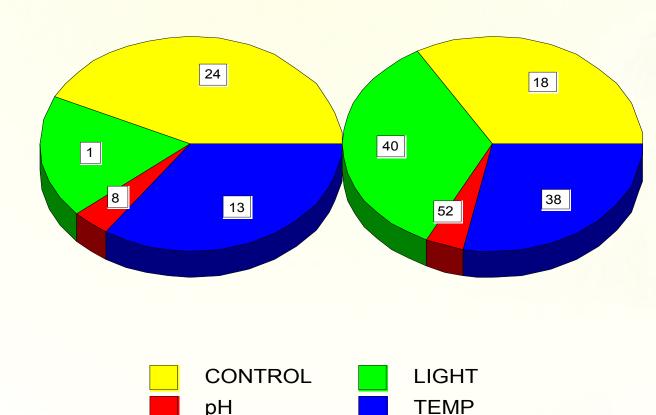

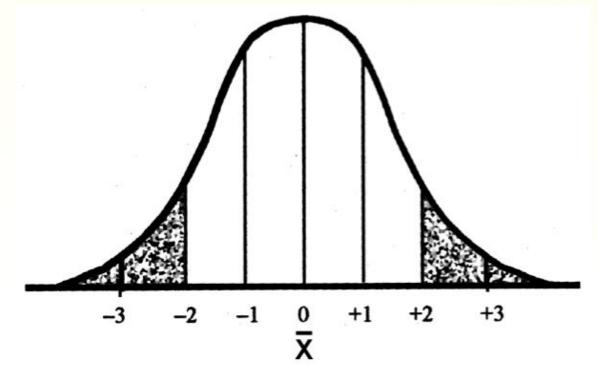

Figure 3. The number of brine shrimp found in sections of tubing after the shrimp were exposed to changes in light, pH, or temperature, on 10/2/2003 at Cabrillo HS.

Perform Comparative Tests

 Use computer software or calculator programs to look for statistically significant differences between data from experimental and control groups

Perform Comparative Tests

- Averages/ Population Means
- Standard Deviation
 - Deviation of data <u>from their mean.</u>
- % Error
 - Deviation from a predicted result
- T-test
 - For data sets that follow <u>normal</u> distribution
- Chi Square
 - Comparing data in <u>% form</u> in 2+ categories
- Diversity Indices
 - Compares <u>species diversity</u> and <u>dominance</u> between different communities
- Mann-Whitney U test
 - Differences in two sets of data by examining a <u>sample</u> of data from <u>each</u> population

DISCUSSION

- Results should be interpreted, critically evaluated, and compared to other reports.
 - The results section presents the "news,"
 - The discussion section contains the "editorial."

- Interpret statistics properly
 - <u>DON'T</u> make broad statements from small samples
 - Use P <.05 that differences have occurred from chance alone

 Examine the amount and possible sources of variability in your data, including experimental error.

 Examine your results for bias and evaluate its effect.

 Look at your data from as many points of view as possible

- Do not make generalized statements that are <u>not</u> based on
 - Your data
 - Known facts
 - Reason

- Relate your findings to other studies
 - Cite those studies
- Remember that LEARNING, not the confirmation of your hypothesis/proposed solution, is your goal.

CONCLUSION

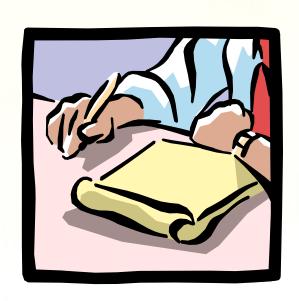

- * Can be included <u>WITHIN</u> the Discussion...
- A brief summary of your findings
 - Follow with a set of clear statements you believe explain your results.

Was your hypothesis/proposed solution

valid or invalid?

References

- References you used and referred to in your paper
- Alphabetical Order by author
- Several papers by the same author:
 - List most recent first
 - Indent 2nd & succeeding

Books (APA Rules)

One Author

Bronowski, J. 2010. *The Ascent of Man.* Boston: Little & Brown, Inc.

By Editor

Ellis, R. (ed.) 2011. Sharks. New York: Wiley.

2 Authors - Local Agency

Walker, R. G. and A. Maben. 2005. The Feeding Ecology of Bats. Guam: DFWR.

Magazines & Scientific Journals

3 Authors, Journal Article (print)

Cochran, J. A., Wiles, G. and J. Manack. 2011. Money, Banking, and the Economy. Fortune 34 (4), 47-55.

NO author, Scientific Bulletin

Insects of Guam. 2010. Honolulu: Bernice P. Bishop Museum. Bull. 172.

News Articles: Print/Online

APA Rules: Newspaper in print

Meier, B. (2013, Jan. 1). Energy Drinks Promise Edge, but Experts Say Proof Is Scant. New York Times, p. 1.

APA Rules: Article online

Williams, A. (2018, July 27) Study shows ocean acidification is having major impact on marine life. Retrieved from https://phys.org

Non-print Sources

Film

Melfi, Theodore dir. 2016. *Hidden Figures.* With Taraji P. Henson, Octavia Spencer and Janelle Monae. 20th Century Fox Studios, Hollywood.

Software

Bill Nye: Greatest Discoveries in Biology. 2005.

Discovery School.com.

DVD.

Non-print Sources

"Personal Communications" with an Expert (in person, on the phone, in letters or on the Internet)

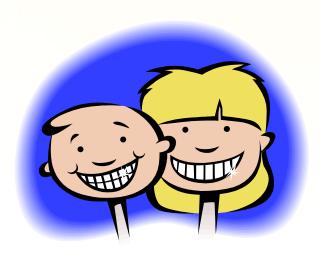

Whitcraft, Dr. Christine. 2018. Asst. Prof. of Biology. CSU Long Beach, CA.

ACKNOWLEDGEMENTS

- Acknowledgements for Senior Projects cannot be on the display board!
- Identify the major people who gave you assistance
- Give them the thanks they deserve

APPENDICES

- Additional pictures and/or material you wish to include
- Make sure any appendices are listed in the table of contents
- DON'T stuff this section unnecessarily it will not win you points...

- Failure to use, evaluate, and interpret your data is the most common problem students have in report writing.
- Ignoring results because they differ from textbook generalizations.
- Bringing too much irrelevant information into reports.

- Making small differences seem important.
- Discarding data because of variability and biases.
- Improperly labeled and cited figures and tables.

- Inserting figures without identifying their contents or purpose
- Failing to number and place each figure close to where it is referred to in the text.
- Not working over the data to seek patterns and trends before preparing figures and tables.

- Forcing a preconceived conclusion on the data.
- "Fudging" your data: it is dishonest and unacceptable and considered scientific misconduct.
- Padding your report with excessive though honest numbers that serve no useful function.

- Not documenting ideas and conclusions with data, literature, and sound reasoning.
- Not relating your results and conclusions to accepted principles and concepts.
